

AERODYNAMIC TEST

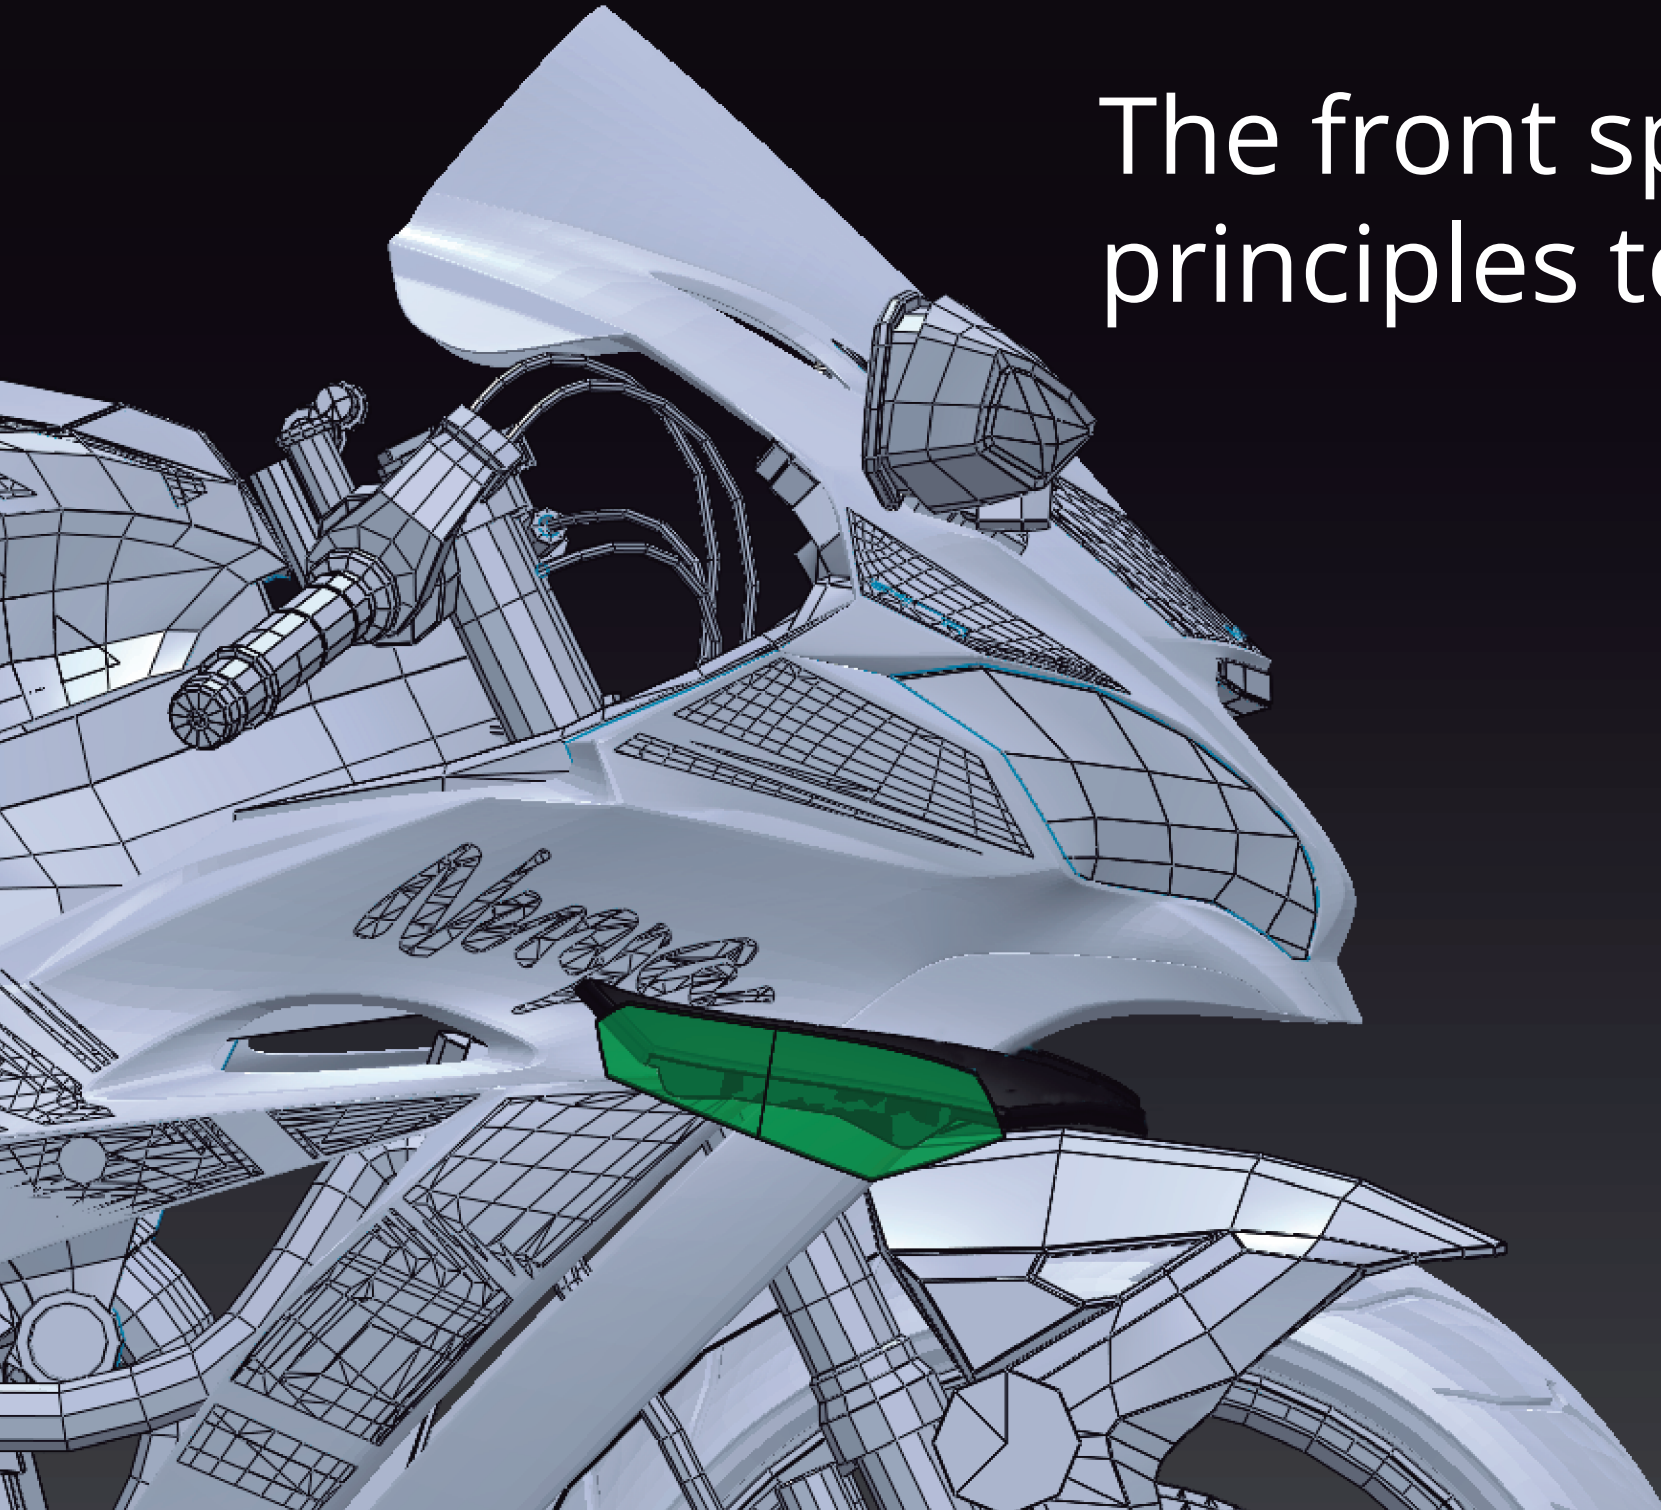

**KAWASAKI ZX-10R
FRONT SPOILERS**

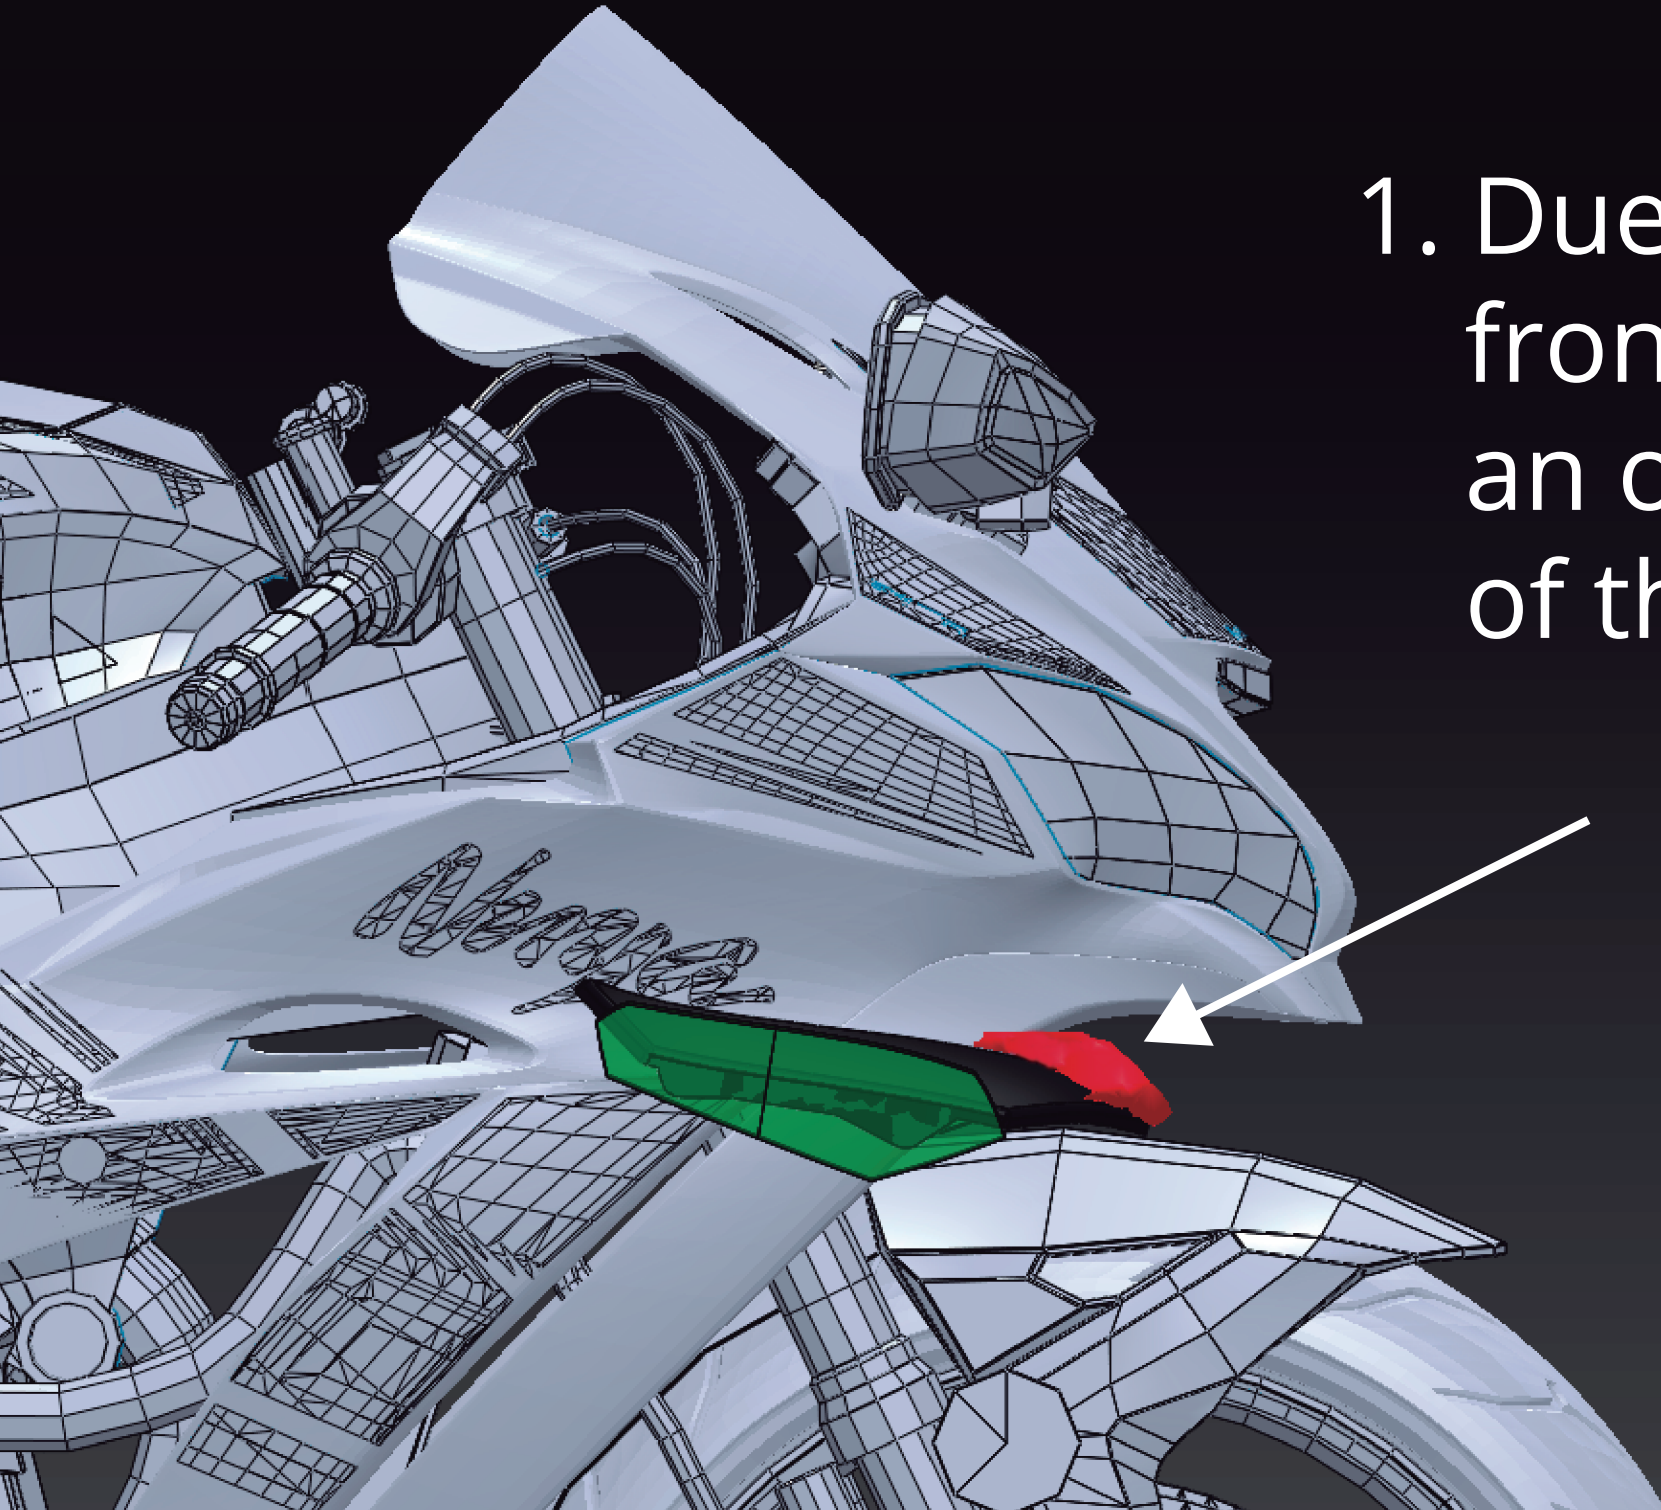

Ref: 9882

The Spoiler gives aerodynamic pressure at the front section of the bike, improving dynamic performance.

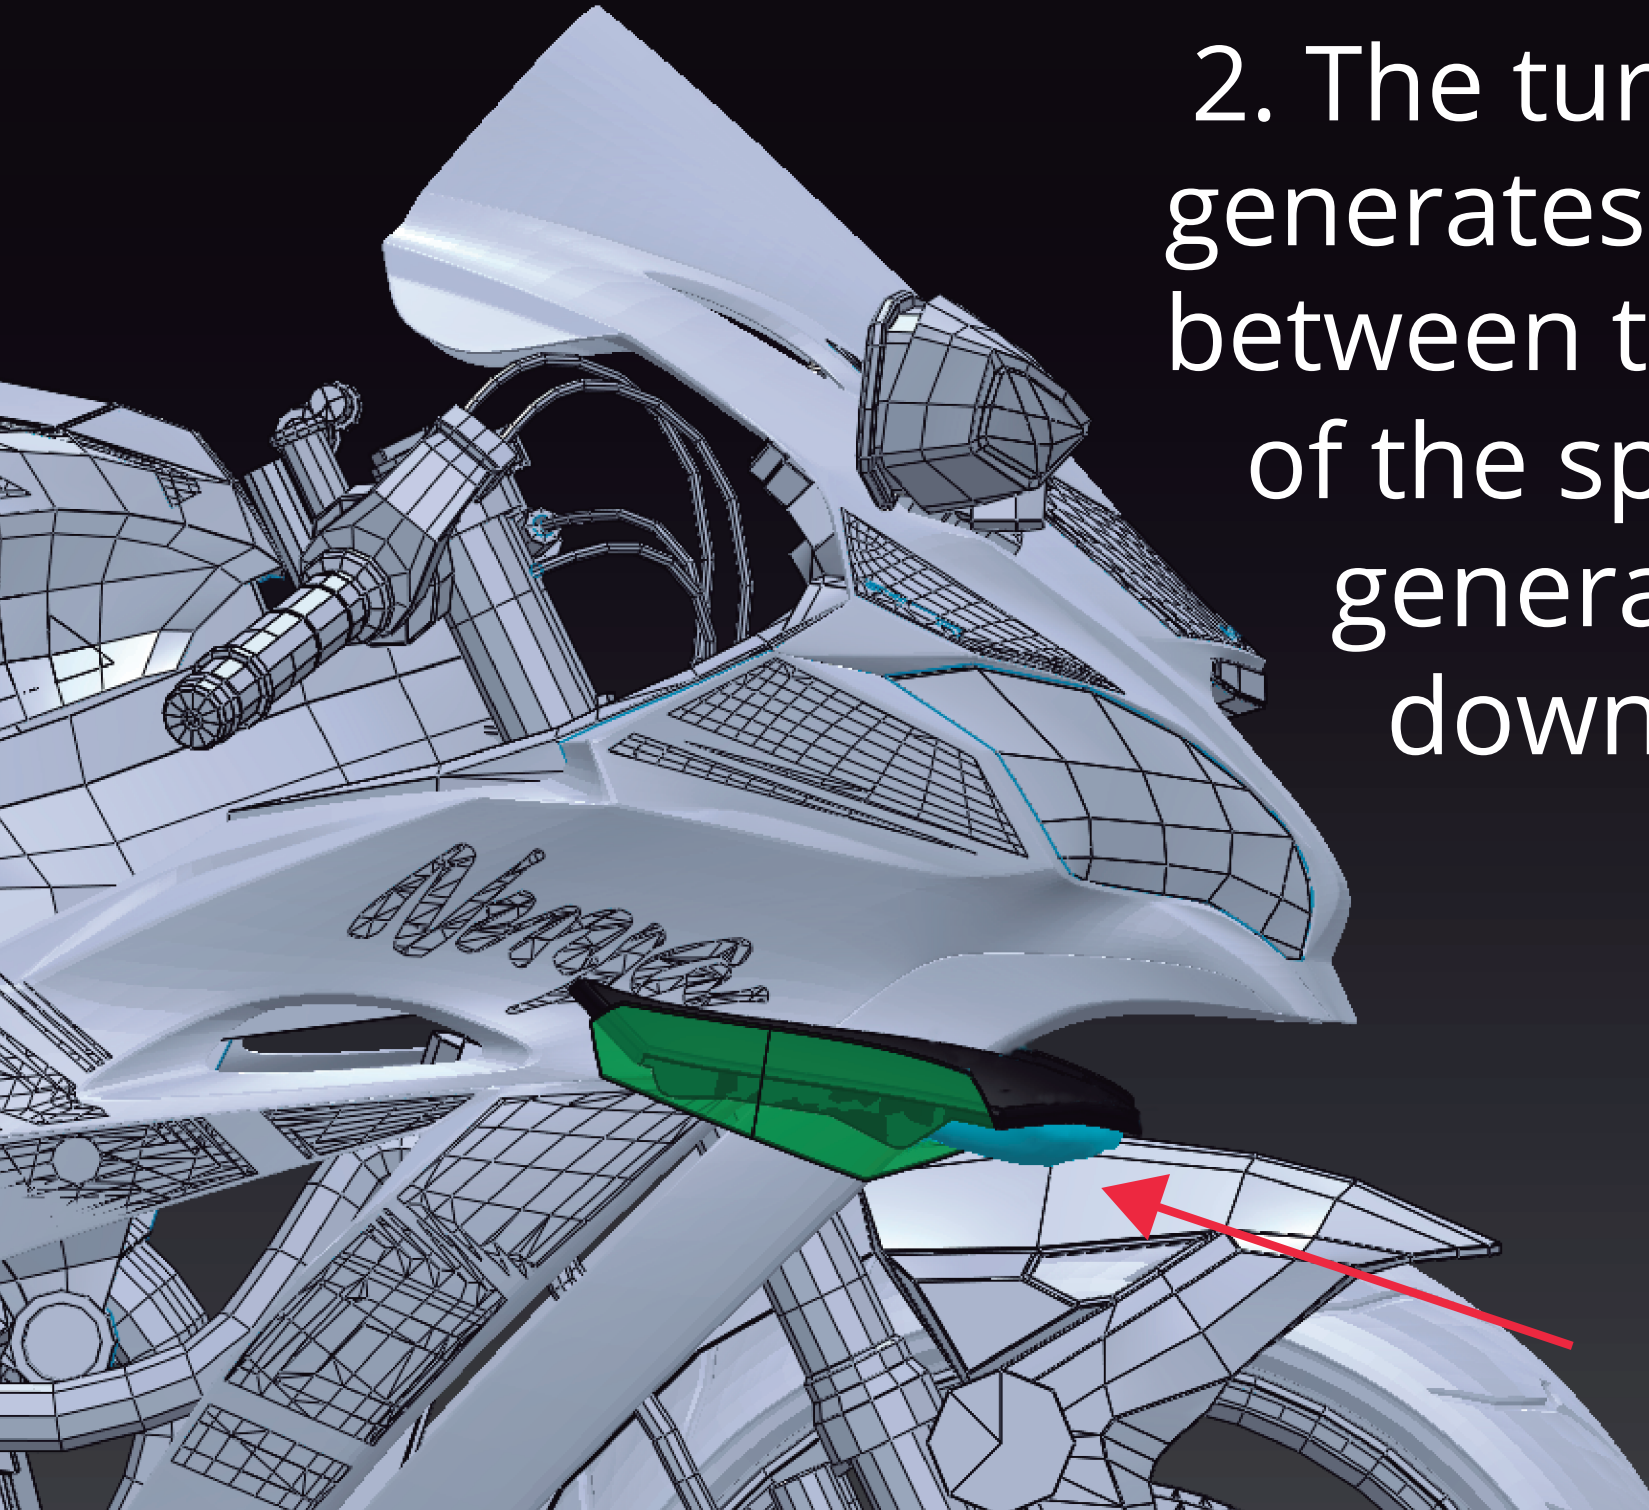

The front spoiler uses two principles to improve performance:

1. Due to its angles and frontal surface, it creates an overpressure on the top of the spoiler.

2. The turbulence create below generates a difference of pressure between the upper and lower parts of the spoilers. Which ultimately generates the aerodynamic downforce.

Spoilers Downforce generated in Kg/f.
